

## Rules

This page contains the rules for your assignments. Any deviation from one or more of the rules means that there is a risk that your assignment may not be approved.

## Part of examination

- The assignments are part of the examination. This means that we are very strict that the work is done by your group.
- Copying code or text from another group is not accepted and is very easy to detect. Each submission will be automatically checked by a tool.
- You may discuss problems with members from other groups but not share the solution between groups. If you are uncertain, you should ask your supervisor.

## Credits and feedback

Your work must be reported properly. Below are some rules that we want you to consider when sending in your work. Failure to follow these rules may result in a not approved assignment.

- Name your files with your group identity (e.g., group4.xml, etc.)
- Adjust the name of the project to your group identity in Eclipse
- Hand in all documents electronically before deadline (i.e., .sr, .doc/.pdf, .xml, .q)
- The report must follow the structure
- We must be able to compile and run the code here at the university so check that your program compile here before you hand it in.
